Squaring Pole

Door installers' guide to accurately installing and replacing entry doors.

1. Measure the door from corner to corner, diagonally.
2. Adjust the length of the pole to fit tight by loosening the wing nut, then tightening again once the pole is secure in the diagonal of the door.
3. Make sure the end blocks of the Squaring Pole fit tight in corners.
4. If the measurement of both diagonals is equal, then the door is square.
